

DML

MAD 202

What is DML?

- DML is an acronym for Data Manipulation Language
- INSERT- will add new information to a table
- UPDATE- allows you to change the values in an existing record.
- DELETE- removes rows from an existing record

Information we need...

- Know the order of the columns in the table
- Know the column names
- Know the columns data types
- Whether column is a key
- Whether the column requires unique values
- Whether the column allows nulls
- Whether the column has a default value
- Table and column constraints
